The B.A.R Story

At the conclusion of a basement finishing job several years ago, the customer purchased a cookie-cutter bar from a local retail store. You know, the type made of dubious material, made in a dubious location, with a sprayed solid color finish, whose purpose was to hide the material. But enough of the editorializing. The problem was, the smallish retail store bar would not even fit through the limited access to the basement (see picture below). We actually removed, and later rebuilt a wall, in order to get the bar into the basement.

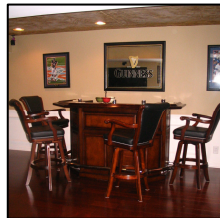

Which got us thinking ... how about a bar designed and built as interlocking parts, which can be easily assembled in any such limited access area? Well, we went to work on the concept, and succeeded beautifully, as you will see.

Tight 90 degree turn with limited headroom.

This was the beginning of B.A.R Barcrafting, an enterprise driven by (B)rent (A)nd (R)ick, two guys with a mission to deliver a flexible bar system which can rival expensive, commercial bar applications. Essentially, any bar size or shape a customer may want can be built to their specifications, in parts guaranteed to pass through any limited access, and interlock with no tools (Patent Pending), at reasonable pricing.

Do you have a basement recreation room, and desire a large bar complex? Consider B.A.R, or hire a furniture builder to custom build your bar inside your basement. Even if you have easy access, B.A.R products provide great value. Family reunion, graduation party, wedding, or any outdoor occasion? Move the front bar to any weather protected area. A large bar will focus your social gathering. Finally, if you move, the bar complex can go with you.

6 foot retail store bar ... **NO GO!**

21 foot custom B.A.R U-Bar complex, passes in pieces, interlocks using no tools. Your friends and family will think you had this bar custom built right in your recreation area.

B.A.R Product Facts

Made in America,
of sustainable American materials.

All bar tops made of 1 ½" solid oak,
maple, cherry or walnut.

Chicago style solid wood arm rails.

Molded spill trays.

Suggested finishes are light to medium
stains in oak or maple, dark stains in
cherry or walnut.

Wall styles in the raised molding
craftsman inspired style, or the classic
solid raised panel style.

All bar parts will pass through any limited
access, guaranteed.

Want only the front or back bar, not the
entire complex? Each is individually priced.

Moving? Take it with you.

Family reunion, graduation party, wedding,
or any other outdoor occasion? Set up the
front bar in any weather protected area.

Compatible with stone tops. Contact us for
information.

Want green? We'll custom build your B.A.R.
complex using bamboo. Contact us for
custom pricing.
